Zeros of Random Polynomial Mappings in Several Complex Variables

(Prof. Norm Levenberg, Indiana University Bloomington)

am **Donnerstag, den 07.04.2022, um 14 Uhr c.t. in Hörsaal 16 (O.06.06).**

Abstract: We discuss some results on random polynomials with an eye towards obtaining universality results under the most general assumptions on the random coefficients. In particular, we generalize and strengthen some previous results on asymptotic distribution of normalized zero measures and currents associated to random polynomials and random polynomial mappings in several complex variables. The talk is based on joint work with Turgay Bayraktar and Tom Bloom.

Alle Interessenten sind herzlich eingeladen!
