**Kolmogorov's problem on width asymptotics for condensers in  $\mathbb{C}^n$**

(**Prof. Vyacheslav Zakharyuta, Sabancı University, Turkey**)

am **Montag, den 15.10.2012, um 16 Uhr c.t. in Raum D.13.15.**

**Abstract:** Let  $K$  be a compact set in an open set  $D$  on a Stein manifold  $\Omega$  of dimension  $n$ . We denote by  $H^\infty(D)$  the Banach space of all bounded and analytic in  $D$  functions endowed with the uniform norm and by  $A_K^D$  a compact subset of the space  $C(K)$  consisted of all restrictions of functions from the unit ball  $\mathbb{B}_{H^\infty(D)}$ . In 1950ies Kolmogorov posed a problem: does there exist a constant  $\tau$  such that the asymptotic holds

$$\mathcal{H}_\varepsilon(A_K^D) \sim \tau \left( \ln \frac{1}{\varepsilon} \right)^{n+1}, \quad \varepsilon \rightarrow 0,$$

where  $\mathcal{H}_\varepsilon(A_K^D)$  is the  $\varepsilon$ -entropy of the compactum  $A_K^D$ . I give a survey of results concerned with this problem and a related problem on the strict asymptotics of Kolmogorov diameters of the set  $A_K^D$  with respect to the unit ball in the space  $C(K)$ . We describe a progress in studying of these problems, beginning with initial results of 1950ies, in the closed connection with the problem on existence of a common basis for the spaces  $A(K)$  and  $A(D)$  with good estimates on sublevel sets of extremal plurisubharmonic function for the pair (condenser)  $(K, D)$ .

Alle Interessenten sind herzlich eingeladen!
